

? ATS Score (Out of 100): 82

The ATS scores well on the resume structure, keyword usage, and concise bullet points. However, I notice a few minor issues that might affect the overall ATS score:

1. The font and layout might not align perfectly with the ATS system requirements.
2. Some keywords are not in bold or italics, making it harder for the ATS system to recognize them.
3. The resume is primarily a functional resume, which might lead to some confusion with the ATS system.

? Best Job Roles

Based on the skills and experience mentioned, I would recommend the following job roles:

1. Junior Data Analyst
2. Junior Software Developer
3. Automation Specialist
4. Business Intelligence Specialist

? Strengths

The candidate possesses the following strengths:

1. Excellent academic background in commerce and computer applications.
2. Strong technical skills in AI platforms (Grok and Gemini), PowerShell, and automation solutions.
3. Proficiency in multiple programming languages and tools (Excel, Python, etc.).

4. Excellent communication and teamwork skills (speaker at WordPress meetup and contributor day participant).
5. Winner of a Website Challenge for WordPress.

? Missing Skills

To further improve the resume, the candidate should consider acquiring or highlighting the following skills:

1. Cloud-based technologies (AWS, Azure, Google Cloud)
2. Cybersecurity
3. Big Data analytics (Hadoop, Spark, etc.)
4. Agile methodologies

? Important ATS Keywords

The following keywords are crucial for the ATS system to identify the candidate's skills and experience:

1. AI
2. Machine Learning
3. Automation
4. PowerShell
5. Python
6. Data Analysis
7. Software Development

8. Business Intelligence
9. Excel
10. DataCamp certifications

? Recommended Certifications

To enhance the candidate's profile, I would recommend pursuing the following certifications:

1. Certified Data Scientist (CDS) from Data Science Council of America (DASCA)
2. Certified Analytics Professional (CAP) from Institute for Operations Research and the Management Sciences (INFORMS)
3. AWS Certified Developer- Associate
4. Certified Information Systems Security Professional (CISSP) from International Information Systems Security Certification Consortium (ISC)2

? Recommended Projects

The candidate should consider participating in real-world projects to enhance their skills and experience:

1. Contributing to open-source projects on GitHub or other platforms
2. Participating in hackathons or coding challenges
3. Building a personal project that showcases their skills in AI, automation, or software development

? Interview Preparation Tips

1. Prepare to answer behavioral questions related to teamwork, communication, and problem-solving.
2. Review and practice answering technical questions related to AI, automation, and software development.
3. Prepare to discuss the technical skills mentioned in the resume and highlight relevant projects or experiences.

? Final Recommendations

Overall, the candidate has a strong academic background, excellent technical skills, and great communication skills. To further enhance their profile, they should consider pursuing additional certifications, participating in real-world projects, and improving their understanding of cloud-based technologies, cybersecurity, and big data analytics.
